

Lesson Plan-G1- 2026-2027

Overview of Course Content • Science • Academic Team, Aksorn Charoen Tat Act - Textbook

Core Goal: In this course, students will explore the natural world through hands on activities and real life connections. We will learn about living thingsm habitats, plants, animals and materials while developing curiosity, observation skills, and care for our environment.

Week	Unit / Topic	Key Focus	Activity Highlight	Presentation Goal
1	Unit 3 Introduction of Habitats	What is habitat? Where living things live and why it matters?	Habitat sorting card game	Introduce a favorite animal and its natural home
2	Unit 3 Where Plants Live	Sunlight, soil, water, forest, desert, aquatic plants.	Plant habitat drawing & labeling	Explain what a plant needs to survive in its home
3	Unit 3 Where Animals Live	Ocean, jungle, farm, shelter, food, adapt.	Build a Habitat" mini-diorama	Present an animal model and describe its habitat
4	Unit 3 Caring for environment	Reduce, reuse, recycle, pollution, protection.	Classroom trash-sorting race	Share 2 ways to keep animal homes clean
5	Unit 4 Materials around us	Wood, plastic, metal, paper, glass, fabric.	Scavenger Hunt" finding classroom materials	Name 3 objects and the materials they are made of
6	Unit 4 Materials and their properties	Hard, soft, flexible, waterproof, rough, smooth.	Touch-and-feel mystery bag experiment	Describe an object's texture and flexibility to peers
7	Unit 4 Sorting materials	Group, classify, bendable vs. rigid, heavy vs. light.	Venn diagram material classification	Explain why a specific material was chosen for an item
8	Unit 3&4 Review- Habitats, Living Things,Plants, Animals and materials	Summary of vocabulary from Units 3 and 4.	Science Quiz Show & poster creation	Show and Tell: Present final unit portfolio poster

Prepared By: Mrs. Honey Mae, Delos Reyes, Cape

SIAM SCHOOL

Lesson Plan-G1- 2026-2027

Science - A • Week 1 • Introduction of Habitats

Subject	Science	Level	Grade 1
Date	6 Aug 2026	Duration	60 minutes
Chapter	2 Exploring Ecosystem and Everyday Matter	Unit	Unit 3
Resource	Academic Team, Aksorn Charoen Tat Act - Textbook	Pages	71

Core Goal

Build scientific understanding of Introduction of Habitats through observation, questioning, discussion, and a hands-on investigation.

Learning Objectives

By the end of the lesson, students will be able to define the term "habitat" and explain its importance in one complete sentence with 100% accuracy.
By the end of the lesson, students will be able to identify and classify at least four different habitats (forest, desert, ocean, and grassland) with at least 80% accuracy.
By the end of the lesson, students will be able to match at least five animals to their correct habitats with at least 80% accuracy during a classroom activity.

Target Vocabulary

Needs, Live, Home, Habitats,

Language Focus

Scientific sentence frames: "I observe...", "I predict...", "The result shows...", and "I conclude..."

Materials & Resources

Topic flashcards or labeled pictures
Textbook or teacher reference materials
Student worksheet or science notebook
Pencils, crayons, and activity materials appropriate for Introduction of Habitats

Warm-Up

1. Mystery Question (1 min)
Ask: "If you were an animal, where would you choose to live? Why?"
Let 2–3 students share their answers.
2. Habitat Match Game (3 mins)
Show pictures of animals (fish, camel, polar bear, monkey, frog, eagle).
Students match each animal to its habitat (ocean, desert, arctic, forest, pond, mountains).
3. Think-Pair-Share (2 mins)
Ask: "What do you think a habitat is?"
Students think, discuss with a partner, and share their ideas.
4. Lesson Transition (1 min)
Conclude:

Lesson Procedure

50-Minute Lesson Procedure: Introduction to Habitats**

1. Warm-Up (7 mins)**

* Ask: **If you were an animal, where would you live? Why?**

* Match animals to their habitats.

* Ask: **What is a habitat?**

2. Lesson Proper (15 mins)**

* Define **habitat** as the natural home of a plant or animal.

* Explain the four basic needs: **food, water, shelter, and space**.

* Introduce common habitats: **forest, desert, ocean, grassland, and Arctic** with example animals.

3. Guided Practice (10 mins)**

Habitat Sorting Activity:** Students match animal pictures to the correct habitat in pairs or groups.

4. Independent Practice (10 mins)**

* Complete a worksheet by matching animals to habitats and drawing a favorite habitat.

5. Assessment (5 mins)**

* Ask:

* What is a habitat?

* What are the four basic needs of living things?

* Name one habitat and one animal that lives there.

6. Closing (3 mins)

* Review the key points.

Exit Ticket:"Today I learned that a habitat is _____."

Teacher Actions

Prepare the inquiry question and demonstrate safe use of materials.

Model the target vocabulary and guide learners with open-ended questions.

Observe groups, correct misconceptions, and connect evidence to the conclusion.

Student Actions

Observe carefully and share a prediction.

Work safely with a partner or group and record findings.

Use the target vocabulary to explain the result and conclusion.

Activity / Project

Scientific Investigation: learners create a labeled model, sorting chart, observation record, or simple demonstration showing their understanding of Introduction of Habitats.

Presentation / Discussion

Each group gives a short "Our Evidence" presentation: what they observed, what happened, and what they concluded.

Habitat is where living things lives

Assessment / Wrap-Up

Teacher observation checklist, vocabulary check, completed activity output, and one exit question: "What did you learn about Introduction of Habitats?"

Homework

Draw or find one real-life example of Introduction of Habitats. Write 2–3 sentences explaining the example using the target vocabulary.

Lesson Plan-G1- 2026-2027

Science • Week 2 • External Body Parts and Their Functions

Subject	Science	Level	Grade 1
Date	20 Jul 2026	Duration	60 minutes
Chapter	Chapter 1: Understanding Our Body, Animals and Plants	Unit	Unit 1: Our Body and Care
Resource	Academic Team, Aksorn Charoen Tat Act - Textbook	Pages	Pages 12-14

Core Goal

Help learners identify common external body parts, explain their basic functions, and practice healthy ways of caring for the body.

Learning Objectives

Identify and describe the key ideas and vocabulary connected to External Body Parts and Their Functions.
Explain the topic using age-appropriate scientific language and evidence.
Follow the investigation or classroom activity safely and in the correct order.
Record observations and communicate a conclusion through speaking, drawing, or writing.

Target Vocabulary

Eyes, Mouth, Hands, Feet, See, Speak, Hold, Walk, External, Body, Parts, Their, Functions, Observe

Language Focus

Scientific sentence frames: "I observe...", "I predict...", "The result shows...", and "I conclude..."

Materials & Resources

Topic flashcards or labeled pictures
Textbook or teacher reference materials
Student worksheet or science notebook
Pencils, crayons, and activity materials appropriate for External Body Parts and Their Functions

Warm-Up

7 minutes — Show a picture, object, or short demonstration related to External Body Parts and Their Functions. Ask: "What do you notice?" and "What do you think will happen?"

Lesson Procedure

1. Engage (7 min): Activate prior knowledge using a question, object, or image.
2. Explore (13 min): Learners observe, sort, test, model, or investigate the lesson concept.
3. Explain (13 min): Discuss observations, introduce the target vocabulary, and connect results to the lesson goal.
4. Apply (20 min): Complete the group or individual task and record findings.
5. Evaluate (7 min): Use an exit question, drawing, or short explanation to check understanding.

Teacher Actions

Prepare the inquiry question and demonstrate safe use of materials.
Model the target vocabulary and guide learners with open-ended questions.
Observe groups, correct misconceptions, and connect evidence to the conclusion.

Student Actions

Observe carefully and share a prediction.
Work safely with a partner or group and record findings.
Use the target vocabulary to explain the result and conclusion.

Activity / Project

Scientific Investigation: learners create a labeled model, sorting chart, observation record, or simple demonstration showing their understanding of External Body Parts and Their Functions. Use textbook pages Pages 12-14.

Presentation / Discussion

Each group gives a short “Our Evidence” presentation: what they observed, what happened, and what they concluded.

Assessment / Wrap-Up

Teacher observation checklist, vocabulary check, completed activity output, and one exit question: “What did you learn about External Body Parts and Their Functions?”

Homework

Draw or find one real-life example of External Body Parts and Their Functions. Write 2–3 sentences explaining the example using the target vocabulary.

Notes

Include a movement song, partner drawing activity, and short oral presentation. Reference: Academic Team, Aksorn Charoen Tat Act - Textbook.

Lesson Plan-G1- 2026-2027

Science - A • Week 2 • Where Plants Live

Subject	Science	Level	Grade 1
Date	13 Aug 2026	Duration	60 minutes
Chapter	2 Exploring Ecosystem and Everyday Matter	Unit	Unit 3
Resource	Academic Team, Aksorn Charoen Tat Act - Textbook	Pages	72-85

Core Goal

Build scientific understanding of Where Plants Live through observation, questioning, discussion, and a hands-on investigation.

Learning Objectives

By the end of the 50-minute lesson, students will be able to:

Identify at least 3 places where plants grow (e.g., garden, forest, farm, or pond) with 80% accuracy.
Describe the basic needs of plants (sunlight, water, air, and soil) by answering oral questions correctly.
Create a simple craft showing a plant in its correct growing place and label where it grows.

Target Vocabulary

Safe, Home, Where, Plants, Live,

Language Focus

Scientific sentence frames: "I observe...", "I predict...", "The result shows...", and "I conclude..."

Materials & Resources

Topic flashcards or labeled pictures
Textbook or teacher reference materials
Student worksheet or science notebook
Pencils, crayons, and activity materials appropriate for Where Plants Live

Warm-Up

Warm-Up (7 mins)
Show pictures of different places (garden, forest, pond, desert).
Ask: "Where do you think plants can grow?"
Let students share their answers.

Lesson Procedure

1. Warm-Up (7 mins)

Show pictures of different places (garden, forest, pond, desert).

Ask: "Where do you think plants can grow?"

Let students share their answers.

2. Lesson Proper (15 mins)

Explain that plants grow in places where they get sunlight, water, air, and soil.

Introduce places where plants grow:

 Forest

 Garden

 Farm

 Pond (water plants)

3. Guided Practice (10 mins)

Sorting Activity: Show pictures of plants and different places.

Students match each plant to where it grows (e.g., cactus → desert, lotus → pond, sunflower → garden).

4. Craft Activity (10 mins) – "My Plant Home"

Materials: Construction paper, pre-cut flower/plant template, crayons, glue, and colored paper.

Instructions:

Give each student a plant template.

Students color and cut it out.

Glue the plant onto a background showing where it grows (garden, forest, farm, or pond).

Add a sun and clouds using paper cutouts or drawings.

5. Assessment (5 mins)

Ask:

What does a plant need to grow?

Name one place where plants grow.

Where does a lotus grow?

6. Closing (3 mins)

Review that plants need sunlight, water, air, and soil to grow.

Exit Ticket: Students say one place where plants grow before leaving. 

Teacher Actions

Prepare the inquiry question and demonstrate safe use of materials.

Model the target vocabulary and guide learners with open-ended questions.

Observe groups, correct misconceptions, and connect evidence to the conclusion.

Student Actions

Observe carefully and share a prediction.

Work safely with a partner or group and record findings.

Use the target vocabulary to explain the result and conclusion.

Activity / Project

Scientific Investigation: learners create a labeled model, sorting chart, observation record, or simple demonstration showing their understanding of Where Plants Live. Craft Activity (10 mins) – "My Plant Home" 

Materials: Construction paper, pre-cut flower/plant template, crayons, glue, and colored paper.

Presentation / Discussion

Each group gives a short “Our Evidence” presentation: what they observed, what happened, and what they concluded.

Where do Plants Grow?

Assessment / Wrap-Up

Teacher observation checklist, vocabulary check, completed activity output, and one exit question: “What did you learn about Where Plants Live?”

Homework

Take a picture of holding a plant and write what did you observe when you pour water.

Lesson Plan-G1- 2026-2027

Science - A • Week 3 • Where Animals Live

Subject	Science	Level	Grade 1
Date	20 Aug 2026	Duration	60 minutes
Chapter	2 Exploring Ecosystem and Everyday Matter	Unit	Unit 3
Resource	Academic Team, Aksorn Charoen Tat Act - Textbook	Pages	72-80

Core Goal

Build scientific understanding of Where Animals Live through observation, questioning, discussion, and a hands-on investigation.

Learning Objectives

By the end of the 50-minute lesson, students will be able to:

Identify at least 3 places where animals live (e.g., forest, farm, ocean, or pond) with 80% accuracy.

Match at least 5 animals to their correct homes or habitats during a class activity.

Create a simple craft showing an animal in its correct habitat and name where it lives.

Target Vocabulary

Grass field, Pond, Underground, Where, Animals, Live,

Language Focus

Scientific sentence frames: "I observe...", "I predict...", "The result shows...", and "I conclude..."

Materials & Resources

Topic flashcards or labeled pictures

Textbook or teacher reference materials

Student worksheet or science notebook

Pencils, crayons, and activity materials appropriate for Where Animals Live

Warm-Up

Warm-Up (7 mins)

Show pictures of different animals (lion, fish, bird, cow, frog).

Ask: "Where do you think these animals live?"

Let students guess and share their answers.

Lesson Procedure

1. Warm-Up (7 mins)

Show pictures of different animals (lion, fish, bird, cow, frog).

Ask: "Where do you think these animals live?"

Let students guess and share their answers.

2. Lesson Proper (15 mins)

Explain that animals live in different places called habitats.

Introduce common habitats:

🌳 Forest – monkey, tiger

🌊 Ocean – fish, dolphin

🐮 Farm – cow, chicken

🦆 Pond – frog, duck

Discuss why each habitat is a good home for the animals.

3. Guided Practice (10 mins)

Animal and Habitat Matching

Give students animal picture cards.

Students match each animal to the correct habitat poster or flashcard.

Review the answers together.

4. Craft Activity (10 mins) – "My Animal Habitat" 🧑🎨

Materials: Animal template, construction paper, crayons, glue, scissors.

Instructions:

Students choose one animal.

Color and cut out the animal.

Glue it onto a background showing its habitat (forest, ocean, farm, or pond).

Draw or add simple details such as trees, water, grass, or a barn.

Write: "A _____ lives in the _____."

5. Assessment (5 mins)

Ask:

What is a habitat?

Where does a fish live?

Where does a cow live?

Name one animal that lives in the forest.

6. Closing (3 mins)

Review that animals live in different habitats where they can find food, water, and shelter.

Exit Ticket: Each student says one animal and where it lives before leaving the classroom. 🐾

Teacher Actions

Prepare the inquiry question and demonstrate safe use of materials.

Model the target vocabulary and guide learners with open-ended questions.

Observe groups, correct misconceptions, and connect evidence to the conclusion.

Student Actions

Observe carefully and share a prediction.

Work safely with a partner or group and record findings.

Use the target vocabulary to explain the result and conclusion.

Activity / Project

Scientific Investigation: learners create a labeled model, sorting chart, observation record, or simple demonstration showing their understanding of Where Animals Live.

Presentation / Discussion

Each group gives a short “Our Evidence” presentation: what they observed, what happened, and what they concluded.

Where do animals live?

Assessment / Wrap-Up

Teacher observation checklist, vocabulary check, completed activity output, and one exit question: “What did you learn about Where Animals Live?”

Homework

Draw or find one real-life example of Where Animals Live. Write 2–3 sentences explaining the example using the target vocabulary.

Lesson Plan-G1- 2026-2027

Science - A • Week 4 • Caring for the environment

Subject	Science	Level	Grade 1
Date	27 Aug 2026	Duration	60 minutes
Chapter	2 Exploring Ecosystem and Everyday Matter	Unit	Unit 3
Resource	Academic Team, Aksorn Charoen Tat Act - Textbook	Pages	75-80

Core Goal

Build scientific understanding of Caring for the environment through observation, questioning, discussion, and a hands-on investigation.

Learning Objectives

By the end of the lesson, students will be able to:

Identify at least 3 ways to care for the environment with 80% accuracy.
Differentiate between actions that help and harm the environment through a sorting activity.
Create a simple craft that shows one way to care for the environment.

Target Vocabulary

Environment, Survive, Preserve, Caring,

Language Focus

Scientific sentence frames: "I observe...", "I predict...", "The result shows...", and "I conclude..."

Materials & Resources

Topic flashcards or labeled pictures
Textbook or teacher reference materials
Student worksheet or science notebook
Pencils, crayons, and activity materials appropriate for Caring for the environment

Warm-Up

Warm-Up (7 mins)
Show pictures of a clean park and a dirty park.
Ask:
"Which place looks better?"
"How can we help keep our environment clean?"
Let a few students share their ideas.

Lesson Procedure

1. Warm-Up (7 mins)

Show pictures of a clean park and a dirty park.

Ask:

"Which place looks better?"

"How can we help keep our environment clean?"

Let a few students share their ideas.

2. Lesson Proper (15 mins)

Explain that the environment is everything around us (plants, animals, water, air, and land).

Discuss simple ways to care for the environment:

 Throw trash in the bin.

 Reduce, reuse, and recycle.

 Plant and care for trees.

 Save water.

 Turn off lights when not in use.

Emphasize that everyone can help protect the Earth.

3. Guided Practice (10 mins)

Good or Bad? Sorting Activity

Show picture cards of different actions.

Students decide if each action helps or harms the environment.

Examples:

Throwing trash in a bin 

Picking up litter 

Leaving the water running 

Planting a tree 

Littering 

4. Craft Activity (10 mins) – "I Care for the Earth"

Materials: Earth template, crayons, colored paper, glue, scissors.

Instructions:

Students color the Earth template.

Draw or glue one picture showing how they care for the environment (e.g., planting a tree, recycling, throwing trash in the bin).

Write the sentence:

"I care for the Earth by _____."

5. Assessment (5 mins)

Ask:

What is the environment?

Name one way to care for the environment.

Why should we keep our surroundings clean?

6. Closing (3 mins)

Review the ways to care for the environment.

Exit Ticket: Each student says one thing they will do today to help the environment before leaving the classroom.  

Teacher Actions

Prepare the inquiry question and demonstrate safe use of materials.

Model the target vocabulary and guide learners with open-ended questions.

Observe groups, correct misconceptions, and connect evidence to the conclusion.

Student Actions

Observe carefully and share a prediction.

Work safely with a partner or group and record findings.

Use the target vocabulary to explain the result and conclusion.

Activity / Project

Scientific Investigation: learners create a labeled model, sorting chart, observation record, or simple demonstration showing their understanding of Caring for the environment.

Presentation / Discussion

Each group gives a short “Our Evidence” presentation: what they observed, what happened, and what they concluded.

Caring for our environment

Assessment / Wrap-Up

Teacher observation checklist, vocabulary check, completed activity output, and one exit question: “What did you learn about Caring for the environment?”

Homework

Draw or find one real-life example of Caring for the environment. Write 2–3 sentences explaining the example using the target vocabulary.

Notes

Lesson Plan-G1- 2026-2027

Science - A • Week 5 • Materils around us

Subject	Science	Level	Grade 1
Date	3 Sept 2026	Duration	60 minutes
Chapter	2 Exploring Ecosystem and Everyday Matter	Unit	Unit 4
Resource	Academic Team, Aksorn Charoen Tat Act - Textbook	Pages	94

Core Goal

Build scientific understanding of Materils around us through observation, questioning, discussion, and a hands-on investigation.

Learning Objectives

By the end of the lesson, students will be able to:

Identify at least 4 common materials (wood, plastic, metal, and glass) with 80% accuracy.

Classify everyday objects according to the material they are made from.

Create a simple craft using different materials and identify the material used.

Target Vocabulary

Usefull things, Objects, Wood, Metal, Rubber, Rock, Materils, Around,

Language Focus

Scientific sentence frames: "I observe...", "I predict...", "The result shows...", and "I conclude..."

Materials & Resources

Topic flashcards or labeled pictures

Textbook or teacher reference materials

Student worksheet or science notebook

Pencils, crayons, and activity materials appropriate for Materils around us

Warm-Up

Warm-Up (7 mins)

Show different classroom objects (pencil, plastic bottle, metal spoon, glass cup, wooden ruler).

Ask:

"What is this object made of?"

"Can you find something in our classroom made of plastic?"

Allow students to observe and share their answers.

Lesson Procedure

1. Warm-Up (7 mins)

Show different classroom objects (pencil, plastic bottle, metal spoon, glass cup, wooden ruler).

Ask:

"What is this object made of?"

"Can you find something in our classroom made of plastic?"

Allow students to observe and share their answers.

2. Lesson Proper (15 mins)

Explain that materials are what objects are made of.

Introduce common materials:

 Wood – table, chair, pencil

 Plastic – bottle, toy, ruler

 Metal – spoon, keys, scissors

 Glass – window, cup

Discuss the simple properties of each material (hard, smooth, strong, transparent).

3. Guided Practice (10 mins)

Material Sorting Activity

Show different object picture cards.

Students match each object to the correct material (wood, plastic, metal, or glass).

Review the answers as a class.

4. Craft Activity (10 mins) – "My Materials Collage"

Materials: Construction paper, small pieces of paper, aluminum foil, popsicle sticks, fabric scraps, glue, crayons.

Instructions:

Students create a simple collage using different materials.

They glue each material onto the paper.

Label each material (e.g., paper, wood, metal).

Share their collage with a partner.

5. Assessment (5 mins)

Ask:

What is a material?

Name one object made of wood.

What material is a spoon made of?

Which material is used to make a window?

6. Closing (3 mins)

Review that objects are made from different materials.

Exit Ticket: Each student holds up or names one classroom object and says what material it is made from.

Teacher Actions

Prepare the inquiry question and demonstrate safe use of materials.

Model the target vocabulary and guide learners with open-ended questions.

Observe groups, correct misconceptions, and connect evidence to the conclusion.

Student Actions

Observe carefully and share a prediction.

Work safely with a partner or group and record findings.

Use the target vocabulary to explain the result and conclusion.

Activity / Project

Scientific Investigation: learners create a labeled model, sorting chart, observation record, or simple demonstration showing their understanding of Materials around us.

Presentation / Discussion

Each group gives a short “Our Evidence” presentation: what they observed, what happened, and what they concluded.

Materials around us that is useful for our daily lives

Assessment / Wrap-Up

Teacher observation checklist, vocabulary check, completed activity output, and one exit question: “What did you learn about Materials around us?”

Homework

Draw or find one real-life example of Materials around us. Write 2–3 sentences explaining the example using the target vocabulary.

Notes

Reference: Academic Team, Aksorn Charoen Tat Act - Textbook.

Lesson Plan-G1- 2026-2027

Science - A • Week 6 • Materials and their properties

Subject	Science	Level	Grade 1
Date	10 Sept 2026	Duration	60 minutes
Chapter	2 Exploring Ecosystem and Everyday Matter	Unit	Unit 4
Resource	Academic Team, Aksorn Charoen Tat Act - Textbook	Pages	—

Core Goal

Build scientific understanding of Materials and their properties through observation, questioning, discussion, and a hands-on investigation.

Learning Objectives

By the end of the lesson, students will be able to:

Identify at least 4 common material properties (hard, soft, rough, and smooth) with 80% accuracy.

Describe the properties of everyday objects using the correct vocabulary.

Create a simple craft using different materials and describe one property of each material used.

Target Vocabulary

Natural materials and Man-made materials, Materials, Their, Properties

Language Focus

Scientific sentence frames: "I observe...", "I predict...", "The result shows...", and "I conclude..."

Materials & Resources

Topic flashcards or labeled pictures

Textbook or teacher reference materials

Student worksheet or science notebook

Pencils, crayons, and activity materials appropriate for Materials and their properties

Warm-Up

Warm-Up (7 mins)

Show different objects (cotton ball, rock, sandpaper, plastic spoon).

Ask:

"How does it feel?"

"Is it hard or soft? Rough or smooth?"

Let students touch the objects and describe them.

Lesson Procedure

1. Warm-Up (7 mins)

Show different objects (cotton ball, rock, sandpaper, plastic spoon).

Ask:

"How does it feel?"

"Is it hard or soft? Rough or smooth?"

Let students touch the objects and describe them.

2. Lesson Proper (15 mins)

Explain that materials have different properties that help us describe them.

Introduce the properties:

🪨 Hard – rock, metal spoon

🛏️ Soft – cotton, pillow

🪵 Rough – tree bark, sandpaper

🥄 Smooth – glass, plastic spoon

Discuss why different objects are made from different materials.

3. Guided Practice (10 mins)

Touch and Sort Activity

Provide different objects for students to touch.

Students sort them into:

Hard / Soft

Rough / Smooth

Discuss the answers together.

4. Craft Activity (10 mins) – "My Texture Book" ✂️

Materials: Folded paper booklet, cotton, sandpaper, aluminum foil, fabric scraps, glue, crayons.

Instructions:

Students make a mini book with four pages:

Hard

Soft

Rough

Smooth

Glue a sample of each material or draw an object with that property.

Label each page.

5. Assessment (5 mins)

Ask:

What does hard mean?

Name one soft object.

Which object is rough?

Which object is smooth?

6. Closing (3 mins)

Review the four properties: hard, soft, rough, and smooth.

Exit Ticket: Each student chooses one classroom object and says one property it has (e.g., "The table is hard.").

Teacher Actions

Prepare the inquiry question and demonstrate safe use of materials.

Model the target vocabulary and guide learners with open-ended questions.

Observe groups, correct misconceptions, and connect evidence to the conclusion.

Student Actions

Observe carefully and share a prediction.

Work safely with a partner or group and record findings.

Use the target vocabulary to explain the result and conclusion.

Activity / Project

Scientific Investigation: learners create a labeled model, sorting chart, observation record, or simple demonstration showing their understanding of Materials and their properties.

Presentation / Discussion

Each group gives a short "Our Evidence" presentation: what they observed, what happened, and what they concluded.

Assessment / Wrap-Up
Teacher observation checklist, vocabulary check, completed activity output, and one exit question: "What did you learn about Materials and their properties?"
Notes

Lesson Plan-G1- 2026-2027

Science - A • Week 7 • Sorting materials

Subject	Science	Level	Grade 1
Date	17 Sept 2026	Duration	60 minutes
Chapter	2 Exploring Ecosystem and Everyday Matter	Unit	Unit 4
Resource	Academic Team, Aksorn Charoen Tat Act - Textbook	Pages	100

Core Goal

Build scientific understanding of Sorting materials through observation, questioning, discussion, and a hands-on investigation.

Learning Objectives

By the end of the lesson, students will be able to:

Identify at least 4 common materials (wood, plastic, metal, and glass) with 80% accuracy.
Sort everyday objects according to the material they are made from.
Create a simple craft by sorting and pasting pictures of objects into the correct material group.

Target Vocabulary

Sorting, Materials

Language Focus

Scientific sentence frames: "I observe...", "I predict...", "The result shows...", and "I conclude..."

Materials & Resources

Topic flashcards or labeled pictures
Textbook or teacher reference materials
Student worksheet or science notebook
Pencils, crayons, and activity materials appropriate for Sorting materials

Warm-Up

1. Warm-Up (7 mins)
Show different classroom objects (wooden ruler, plastic bottle, metal spoon, glass cup).
Ask:
"What is this made of?"
"Can we group these objects?"
Allow students to guess the correct material."

Lesson Procedure

1. Warm-Up (7 mins)

Show different classroom objects (wooden ruler, plastic bottle, metal spoon, glass cup).

Ask:

"What is this made of?"

"Can we group these objects?"

Allow students to guess the correct material.

2. Lesson Proper (15 mins)

Review the four common materials:

 Wood

 Plastic

 Metal

 Glass

Explain that we can sort materials by grouping objects made from the same material.

Give examples of objects for each material.

3. Guided Practice (10 mins)

Sorting Game

Give students picture cards of different objects.

Students place each picture under the correct material heading (Wood, Plastic, Metal, or Glass).

Review the answers together.

4. Craft Activity (10 mins) – "Materials Sorting Chart"

Materials: Worksheet with four boxes (Wood, Plastic, Metal, Glass), picture cutouts, glue, crayons.

Instructions:

Students color and cut out the object pictures.

Paste each picture into the correct material box.

Color the worksheet neatly.

5. Assessment (5 mins)

Ask:

What material is a spoon made of?

Name one object made of wood.

Which material is used to make a bottle?

Why do we sort materials?

6. Closing (3 mins)

Review that objects are made of different materials and can be sorted into groups.

Exit Ticket: Each student names one classroom object and tells the class what material it is made from.

Teacher Actions

Prepare the inquiry question and demonstrate safe use of materials.

Model the target vocabulary and guide learners with open-ended questions.

Observe groups, correct misconceptions, and connect evidence to the conclusion.

Student Actions

Observe carefully and share a prediction.

Work safely with a partner or group and record findings.

Use the target vocabulary to explain the result and conclusion.

Activity / Project

Scientific Investigation: learners create a labeled model, sorting chart, observation record, or simple demonstration showing their understanding of Sorting materials.

Presentation / Discussion

Each group gives a short "Our Evidence" presentation: what they observed, what happened, and what they concluded.

Assessment / Wrap-Up

Teacher observation checklist, vocabulary check, completed activity output, and one exit question: "What did you learn about Sorting materials?"

Homework

Draw or find one real-life example of Sorting materials. Write 2–3 sentences explaining the example using the target vocabulary.

Lesson Plan-G1- 2026-2027

Science - A • Week 8 • Review – Habitats, Living Things, Plants, Animals, and Materials

Subject	Science	Level	Grade 1
Date	24 Sept 2026	Duration	60 minutes
Chapter	2 Exploring Ecosystem and Everyday Matter	Unit	Unit3 and 4
Resource	Academic Team, Aksorn Charoen Tat Act - Textbook	Pages	70-123

Core Goal

Build scientific understanding of Review through observation, questioning, discussion, and a hands-on investigation.

Learning Objectives

By the end of the lesson, students will be able to:

Identify key concepts from the unit (habitats, where plants grow, where animals live, and materials) with 80% accuracy.
Classify plants, animals, habitats, and materials correctly during review activities.
Create a simple review craft that shows their understanding of the topics learned.

Target Vocabulary

Review, Observe, Explain, Practice, Present

Language Focus

Scientific sentence frames: “I observe...”, “I predict...”, “The result shows...”, and “I conclude...”.

Materials & Resources

Topic flashcards or labeled pictures
Textbook or teacher reference materials
Student worksheet or science notebook
Pencils, crayons, and activity materials appropriate for Review

Warm-Up

7 minutes — Show a picture, object, or short demonstration related to Review. Ask: “What do you notice?” and “What do you think will happen?”

Lesson Procedure

50-Minute Lesson Procedure

1. Warm-Up (7 mins) – Review Quiz

Show pictures and ask students to answer:

What is a habitat?

Where does a fish live?

Where do plants grow?

What is this object made of?

Is this object hard or soft?

2. Lesson Proper (15 mins) – Review Discussion

Review the topics:

 Habitats – A habitat is a place where living things live.

 Where Plants Grow – Garden, forest, farm, pond.

 Where Animals Live – Forest, ocean, farm, pond.

 Materials Around Us – Wood, plastic, metal, glass.

 Properties of Materials – Hard, soft, rough, smooth.

 Sorting Materials – Grouping objects by the material they are made from.

3. Guided Practice (10 mins) – Review Stations

Prepare picture cards.

Students sort them into:

 Plants

 Animals

 Habitats

 Materials

Then describe one property if it is a material.

4. Craft Activity (10 mins) – "My Science Review Wheel"

Materials: Paper plate or circle template divided into four sections, crayons, glue.

Students complete the four sections:

 Draw a plant and where it grows.

 Draw an animal and its habitat.

 Draw one object and write its material.

 Write or draw one property (hard, soft, rough, or smooth).

5. Assessment (5 mins)

Ask:

What is a habitat?

Name one place where plants grow.

Where does a cow live?

Name one material.

Name one property of a material.

6. Closing (3 mins)

Review:

Living things need habitats.

Plants and animals live in different places.

Objects are made from different materials.

Materials have different properties and can be sorted.

Teacher Actions

Prepare the inquiry question and demonstrate safe use of materials.

Model the target vocabulary and guide learners with open-ended questions.

Observe groups, correct misconceptions, and connect evidence to the conclusion.

Student Actions

Exit Ticket: Each student shares one new thing they learned from the unit or identifies one picture shown by the teacher (habitat, plant, animal, material, or property)

Activity / Project

Scientific Investigation: learners create a labeled model, sorting chart, observation record, or simple demonstration showing their understanding of Review.

Presentation / Discussion

Each group gives a short “Our Evidence” presentation: what they observed, what happened, and what they concluded.

Assessment / Wrap-Up

Teacher observation checklist, vocabulary check, completed activity output, and one exit question: “What did you learn about Review?”
